

## How does it work?

The procedure starts with using our innovative VirtuEye Photo Registration Platform to ensure the most precise location of the balloon for optimal placement. The balloon will be slowly inserted to the desired position within the sinus. It is then gently inflated to dilate the sinus passage to help open your sinuses and allow them to drain naturally again.

*It's that simple.*

Blocked and inflamed nasal passages interfere with breathing and lead to rhinosinusitis symptoms

The balloon is positioned and then expanded, which gently remodels the sinus pathway

Optimal dilation of the sinus is designed to improve normal drainage of the pathway and provide symptom relief

Our balloon dilation device comes with unique 3D software called VirtuEye, allowing your doctor to achieve precise image registration and perform the procedure with pinpoint accuracy—with contact-free patient registration.

The VenSure Nav Balloon Device is intended for use in conjunction with the Cube Navigation System during sinus procedures when surgical navigation or image-guided surgery may be necessary to locate and move tissue, bone or cartilaginous tissue surrounding the drainage pathways of frontal, maxillary, and sphenoid sinuses to facilitate dilation of the sinus ostia. The Cube Navigation System is indicated for any medical condition in which the use of stereotactic surgery may be appropriate, and where reference to a rigid anatomical structure can be identified relative to a CT or MR based model of the anatomy. The navigation system must not be used in patients with electronic devices in direct connection to the brain or the nervous system such as implantable neurostimulators, programmable CSF shunts or with monopolar pacemakers (older designs, with lower resistance to interference) or ICD's. ## Understanding your chronic rhinosinusitis

As many as 1 in 8 adults in the United States suffer from chronic rhinosinusitis—a condition in which the sinuses within the nose and head become swollen and inflamed for three months or longer, causing blockage of airflow and drainage. Over time the sinuses can become infected leading to inflammation and pain.<sup>1</sup>

## Chronic rhinosinusitis symptoms can include<sup>1</sup>:

-  Facial pain, pressure, or fullness
-  Loss of smell or taste
-  Headache
-  Nasal congestion and blockage
-  Runny nose/nasal discharge
-  Fatigue/tiredness

Living with chronic rhinosinusitis is an exhausting condition, and it may complicate the activities of daily life, which makes simple things difficult to enjoy.

If you've spent your time cycling through medications and the thought of undergoing sinus surgery seems inconvenient or concerning—then consider the VenSure balloon sinus dilation system.

Only you understand how you feel.  
*You do not have to suffer*

## Choose your journey to relief

### Choice 1

#### Take current medications that may not be enough

You may be trapped in a cycle of going from one medicine to another as you try to control your symptoms.

Up to 60% of patients may not experience improvement in their symptoms using medication.<sup>2</sup>

### Choice 2

#### Consider traditional sinus surgery that may be costly and/or inconvenient<sup>1-3</sup>

Even though sinus surgery is performed upwards of a half a million times per year in the US, and symptoms may be temporarily relieved, repeat surgery is often needed.<sup>2,3</sup>

Sinus surgery may be a costly option due to the nature of the technique.<sup>1</sup>

### Choice 3

#### Simplify your journey with balloon sinus dilation

Balloon sinus dilation offers a convenient, lower-cost solution by providing rapid resolution of symptoms equivalent to traditional sinus surgery, and a minimal risk of complications.<sup>4-8</sup>

#### Minimally invasive process<sup>4,5</sup>

Our small balloon gently opens the blocked sinuses with precision, reducing the risk of complications in comparison to other surgical procedures.

#### Rapid recovery<sup>4,5</sup>

Because balloon sinus dilation preserves the integrity of the sinus tissue, it allows for quick recovery times as most patients may return to regular activity as early as the very next day.

Ask your doctor if VenSure is right for you.

#### Convenient and cost-effective<sup>4-6</sup>

The sinus procedure can be performed right in your doctor's office, thereby reducing the need for costly hospital stays and expensive medications.

#### Symptom relief<sup>4-8</sup>

VenSure balloon sinus dilation is designed to open the sinus passages providing improvement of debilitating symptoms that you may be experiencing.

## VenSure balloon sinus dilation is an alternative choice

Offering a minimally invasive balloon sinus procedure designed to improve debilitating symptoms

#### Innovative design

The device is flexible and responsive, which allows your doctor to tailor and adapt their technique to your sinus anatomy.

#### Confidently precise

State of the art navigation technology arms your doctor with the ability to accurately position the balloon during the procedure making the experience comfortable for you and convenient for them, with the addition of our intuitive image guidance system.

#### Optimally efficient

Our balloon dilation system enables surgeons to simply remodel your sinus passages and help provide relief from your chronic rhinosinusitis symptoms.

Make VenSure your guide to relief
